

Investment Objective: to target capital growth with less of the volatility of global equities at a rate of 3-4% in excess of a composite target benchmark over a five-year period, net of fees.

Target Benchmark: comprising 50% UK CPI five-year average and 50% UK Conventional Gilts up to five years index; and volatility vs MSCI World GBP Hedged (See NOTES).

Investment Philosophy: the manager believes growth equity investments can often come with too much volatility on their own and make too much of an uncomfortable ride for many investors to stay the course. We seek to reduce much of that volatility by combining growth with income yielding investments and downside protective strategies to reduce volatility in times of market stress. If we can achieve this, investors may be more confident to remain invested with their savings and investment plans for the long-term.

Investment Process: minimum 80% invested in global equities and corporate bonds whilst seeking to reduce volatility by investing in government bonds, instruments with exposure to precious metals, unhedged foreign currency and the use of derivatives for efficient portfolio management purposes.
