Risk & Reward

This indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund. The risk category shown is not guaranteed to remain unchanged and may shift over time. The lowest category does not mean 'risk free'. The Fund appears as a "4" on the scale. This is because it invests in a mixture of investments. The value of some of these investments may vary more widely than others.

The indicator above does not take account of the following risks of investing in the Fund: there is a risk that third parties that the Fund enters into investment contracts with will fail to meet their obligations and the Fund may suffer a loss; changes in exchange rates may mean the value of your investment goes up and down; interest rate movements affect the value of bonds - bonds with a longer maturity period are more sensitive to changes in interest rates; a third party which issues bonds may fail to meet the interest repayments or repay its debt, leading to losses for the Fund. The risk is greater for investments that have a lower credit-rating.

For full details of the Fund's risks please see the Fund's prospectus.
